Academic Systems Review

Prior to the Academic Systems Review visit, Board staff reviewed the Charter Holder's contract, as amended, to identify the program of instruction the Charter Holder is required to deliver. Additionally, prior to conducting classroom observations, Board staff discussed the program of instruction with school leadership to further understand the methods of instruction utilized at the school.

The Charter Holder's program of instruction as described in the Program of Instruction and by school leadership is to provide the best education to students from low-income and first generation immigrant families. The school uses Core Knowledge Language Arts and Saxon Math curriculum, as well as an individualized remediation or enrichment program called WIN ("What I Need"), tailored to individual student needs.

During classroom observations, Board staff observed students engaged in whole group, small group, and individual instruction. Students were observed working with subject matter curriculum in Core Knowledge Language Arts and Saxon Math. Additionally, board staff observed students working independently during WIN on either Fast ForWord or Reading Horizons for reading intervention or enrichment.

A set of criteria is used by Board staff to review the school's implementation of its academic systems. The documents provided by the Charter Holder during the ASR site visit leadership discussion and classroom observations, are scanned, recorded, and deemed as either "Meets" or "Does Not Meet" as sufficient evidence of implementation of the criteria.

To view scanned documents, see Appendix A-E. Academic Systems Review Site Visit Inventory I.-V.

Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
MA.5.5.NBT.B.7 - (x10)	(x10) - Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.

MA.7.7.RP.A.2.c - (x0)	(x0) - Represent proportional relationships by equations.
MA.7.7.RP.A.2.d - (x0)	(x0) - Explain what a point (\square, \square) on the graph of a proportional relationship means in terms of the situation, with special attention to the points $(0, 0)$ and $(1, \square)$ where \square is the unit rate.
MA.7.7.RP.A.3 - (x0)	(x0) - Use proportional relationships to solve multistep ratio and percent problems.
MA.7.7.SP.A.1 - (x0)	(x0) - Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.
MA.7.7.SP.A.2 - (x0)	(x0) - Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions.
MA.7.7.SP.B.3 - (x0)	(x0) - Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability.
MA.7.7.SP.B.4 - (x0)	(x0) - Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations.

MA.7.7.SP.C.5 - (x0)	(x0) - Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around 1/2 indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.
MA.7.7.SP.C.6 - (x0)	(x0) - Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability.
MA.7.7.SP.C.7.a - (x0)	(x0) - Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events.
MA.7.7.SP.C.7.b - (x0)	(x0) - Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process.
MA.7.7.SP.C.8.a - (x0)	(x0) - Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.
MA.7.7.SP.C.8.b - (x0)	(x0) - Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event.
MA.7.7.SP.C.8.c - (x0)	(x0) - Design and use a simulation to generate frequencies for compound events.

(x0) - Mathematically proficient students explain to themselves the meaning of a problem, look for entry points to begin work on the problem, and plan and choose a solution pathway. While engaging in productive struggle to solve a problem, they continually ask themselves, "Does this make sense?" to monitor and evaluate their progress and change course if necessary. Once they have a solution, they look back at the problem to determine if the solution is reasonable and accurate. Mathematically proficient students check their solutions to problems using different methods, approaches, or representations. They also compare and understand different representations of problems and different solution pathways, both their own and those of others.

(x1) - Mathematically proficient students look for and describe regularities as they solve multiple related problems. They formulate conjectures about what they notice and communicate observations with precision. While solving problems, students maintain oversight of the process and continually evaluate the reasonableness of their results. This informs and strengthens their understanding of the structure of mathematics which leads to fluency.

(x2) - Mathematically proficient students make sense of quantities and their relationships in problem situations. Students can contextualize and decontextualize problems involving quantitative relationships. They contextualize quantities, operations, and expressions by describing a corresponding situation. They decontextualize a situation by representing it symbolically. As they manipulate the symbols, they can pause as needed to access the meaning of the numbers, the units, and the operations that the symbols represent. Mathematically proficient students know and flexibly use different properties of operations, numbers, and geometric objects and when appropriate they interpret their solution in terms of the context.

(x0) - Mathematically proficient students construct mathematical arguments (explain the reasoning underlying a strategy, solution, or conjecture) using concrete, pictorial, or symbolic referents. Arguments may also rely on definitions, assumptions, previously established results, properties, or structures. Mathematically proficient students make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples.

Mathematically proficient students present their arguments in the form of representations, actions on those representations, and explanations in words (oral or written). Students critique others by affirming or questioning the reasoning of others. They can listen to or read the reasoning of others, decide whether it makes sense, ask questions to clarify or improve the reasoning, and validate or build on it. Mathematically proficient students can communicate their arguments, compare them to others, and reconsider their own arguments in response to the critiques of others.

(x0) - Mathematically proficient students apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. When given a problem in a contextual situation, they identify the mathematical elements of a situation and create a mathematical model that represents those mathematical elements and the relationships among them. Mathematically proficient students use their model to analyze the relationships and draw conclusions. They interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

(x0) - Mathematically proficient students clearly communicate to others using appropriate mathematical terminology, and craft explanations that convey their reasoning. When making mathematical arguments about a solution, strategy, or conjecture, they describe mathematical relationships and connect their words clearly to their representations. Mathematically proficient students understand meanings of symbols used in mathematics, calculate accurately and efficiently, label quantities appropriately, and record their work clearly and concisely.

(x1) - Mathematically proficient students consider available tools when solving a mathematical problem. They choose tools that are relevant and useful to the problem at hand. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful; recognizing both the insight to be gained and their limitations. Students deepen their understanding of mathematical concepts when using tools to visualize, explore, compare, communicate, make and test predictions, and understand the thinking of others.

(x3) - Mathematically proficient students use structure and patterns to assist in making connections among mathematical ideas or concepts when making sense of mathematics. Students recognize and apply general mathematical rules to complex situations. They are able to compose and decompose mathematical ideas and notations into familiar relationships. Mathematically proficient students manage their own progress, stepping back for an overview and shifting perspective when needed.

These grades 6–8 curriculum modules are designed to address CCSS ELA outcomes during a 45-minute English Language Arts block. The overarching focus for all modules is on building students’ literacy skills as they develop knowledge about the world.

Taken as a whole, these modules are designed to give teachers concrete strategies to address the “instructional shifts” required by the CCSS.

Structure of a Module

- Each module provides eight weeks of instruction, broken into three shorter units. Each module includes seven assessments:
 - Six unit-level assessments that almost always are on-demand: students’ independent work on a reading, writing, speaking, or listening task.
 - One final performance task that is a more supported project, often involving research.

Structure of a Year of Instruction

- There are six modules per grade level.
- Of these six modules, teachers would teach four: Module 1, followed by either Module 2A or 2B, then either 3A or 3B, then Module 4.
- Teachers should begin the year with Module 1, which lays the foundation for both teachers and students regarding instructional routines.
- For Modules 2 and 3, option B formally assesses all standards formally assessed in Option A (and possibly some additional standards as well).

How to Read This Document

The purpose of this document is to provide a high-level summary of each module and name the standards formally assessed in each module.

- **Module focus:** Read this first. The “focus” is the same across the grades 3-5 band and signals the progression of literacy skills across the year as well as alignment to the CCSS instructional shifts.
- **Module title:** This signals the topic students will be learning about (often connected to social studies or science) and aligns with Instructional Shift #1, building knowledge through content-rich nonfiction.
- **Description:** These three or four sentences tell the basic “story” of the eight-week arc of instruction: the literacy skills, content knowledge, and central text.
- **Texts:** This lists texts that all students read. The text in bold is the extended text for a given module: the text(s) with which students spend the most time. Remember that texts can be complex based on both qualitative and quantitative measures. Texts are listed in order from most quantitatively complex (based on Lexile® measure) to least quantitatively complex. Texts near the bottom of the list are often complex in ways other than Lexile. Within a given module, the list shows the wide variety of texts

students read as they build knowledge about a topic. This aligns with Instructional Shift #1, building knowledge through content-rich nonfiction. For a procurement list that specifies texts that need to be purchased for use with the curriculum, go to commoncoresuccess.elschools.org or EngageNY.org and search for the document “Trade Books and Other Resources.”

- **Final Performance Task:** This is a culminating project, which takes place during Unit 3 of every module. Performance tasks are designed to help students synthesize and apply their learning from the module in an engaging and authentic way. Performance tasks are developed using the writing process, are scaffolded, and almost always include peer critique and revision. Performance tasks are not “on-demand” assessments. (Note: The end of Unit 3 assessment often addresses key components of the performance task.)
- **Unit-Level Assessments**
 - Each unit includes two assessments, most of which are “on-demand” (i.e., show what you know/can do on your own).
 - Mid-unit assessments typically, though not always, are reading assessments: text-based answers.
 - End of unit assessments typically, though not always, are writing assessments: writing from sources.
 - Most assessments have a heavy emphasis on academic vocabulary, particularly determining words in context.
 - Assessments are designed to be curriculum-embedded opportunities to practice the types of skills needed on state assessments.
 - The curriculum map below lists the title of each assessment, the standards assessed, and the assessment format.
 - Selected response (multiple-choice questions)
 - Short constructed-response (short-answer questions of the type that is scored using the New York State 2-point rubric)
 - Extended response (longer writing or essays of the type that is scored using the New York State 4-point rubric) (either on-demand or supported)
 - Speaking and listening (discussion or oral presentation)
 - Scaffolded essay (involving planning, drafting, and revision)
- **Standards:** In each module, the standards formally assessed are indicated with a check mark; see details below.

	Module 1	Module 2A	Module 2B	Module 3A	Module 3B	Module 4
Focus	Reading Closely and Writing to Learn	Working with Evidence	Working with Evidence (Drama)	Understanding Perspectives	Understanding Perspectives	Reading for Research and Writing an Argument
Module Title	Myths: Not Just Long Ago	Rules to Live By	Voices of Adversity	The Land of the Golden Mountain	Sustaining the Oceans	Insecticides: Costs vs. Benefits
Description	<p>Students study the purposes and elements of mythology. Students read Rick Riordan's <i>The Lightning Thief</i> with a focus on the archetypal hero's journey and close reading of the many mythical allusions. They also read complex informational texts about the elements of mythology.</p> <p>As a whole class, students will closely read several complex Greek myths, and then work in small groups to build expertise on an additional myth. Students then develop their narrative writing skills as they create their own hero's journey narrative.</p>	<p>How do people formulate and use "rules" to improve their lives and communicate these "rules" to others? Students consider these questions as they read a variety of texts. They begin with <i>Bud, not Buddy</i>, analyzing character development and considering how figurative language contributes to tone and meaning. They then read closely Steve Jobs' speech, (focusing on how Jobs develops his ideas at the paragraph, sentence, and word level) and analyze the poem "If" to compare and contrast how the novel and the poem address a similar theme. In an argument essay, students establish a claim about how Bud uses his rules. Finally, students conduct a short research project related to their own "rules to live by" and then write an essay to inform about one important "rule to live by."</p>	<p>Students explore the idea of adversity of people across time and place, and through multiple modes of writing. Students begin this module with a research-based unit on the Middle Ages. They break into expert groups to read closely about one demographic group in order to write an informational essay based on their research. Students then move on to read literature: <i>Good Masters! Sweet Ladies! Voices from a Medieval Village</i>, in order to identify the various adversities faced by this cast of characters and to examine the author's craft. To conclude the unit students move into modern voices of adversity by reading concrete poems in the books <i>Blue Lipstick</i> and <i>Technically, It's Not My Fault</i> and write their own text about adversities faced by sixth-graders.</p>	<p>Students study how an author develops point of view and how an author's perspective, based on his or her culture, is evident in the writing. As students read Lawrence Yep's <i>Dragonwings</i>, they analyze how Yep has developed the point of view of the narrator, Moon Shadow. They also read excerpts of Yep's biography <i>The Lost Garden</i> to determine how his culture and experiences have shaped his perspective as evidenced in the novel. They read accounts by people from the turn of the century in San Francisco, analyzing perspective and comparing the accounts to those in the novel. Finally, students write newspaper articles that convey multiple perspectives about life for Chinese immigrants in San Francisco in the early 1900s.</p>	<p>Students study how an author develops point of view and how an author's perspective, based on his or her geographic location, is evident in his or her writing. Students consider point of view as they learn about ocean conservation and the impact of human activities on life in the oceans. They read Mark Kurlansky's <i>World without Fish</i>, and analyze how point of view and perspective is conveyed, and trace the idea of fish depletion throughout the text. Students also read <i>Flush</i>, a high-interest novel and excerpts of an interview with author Carl Hiaasen to determine how his geographic location in Florida shaped his perspective and how his perspective is evident in his novel. To conclude the module students write an informative consumer guide about buying fish to be put in a grocery store</p>	<p>Students consider the balance between human needs and environmental consequences as they read the novel <i>Frightful's Mountain</i> and complex informational texts about the benefits and drawbacks of the use of DDT. They learn how to trace and evaluate an argument in written texts and videos on this topic, and conduct both supported and independent research. Through structured discussions and decision-making protocols, students form their own argument about the use of DDT. Students then apply their research to write a position paper in which they support that claim with evidence.</p>

Common Core ELA Standards Formally Assessed, by Module

- In the curriculum map below, any specific CCSS with a check mark indicates formally assessed.
- Some standards are formally assessed in multiple modules.
- “B” modules will assess all the same standards as “A” modules but may address additional standards.
- Because of the integrated nature of the standards, even standards that are not formally assessed are often embedded in instruction throughout every module (e.g., RI/RL.1).
- Some standards are not applicable in an on-demand assessment context (e.g., R.10 or W.10). In the curriculum map below, these standards are noted as “integrated throughout.”
- Some standards (e.g., W.2) have a main or “parent” standard and then subcomponents (e.g., W.2a). Often, students’ mastery of the entirety of this standard is scaffolded across multiple modules. Therefore, in the curriculum map below, the “parent” standard is checked only if all components of that standard are formally assessed within that particular module. Otherwise, just the specific components are checked.

<input checked="" type="checkbox"/> Varied instructional tools and strategies reflect student needs and learning objectives	<input checked="" type="checkbox"/> Teacher provides students with a positive learning environment
<input checked="" type="checkbox"/> Content presented is accurate and grade appropriate	<input checked="" type="checkbox"/> Instructional time is used effectively
<input checked="" type="checkbox"/> Teacher connects lesson to real-life application	<input type="checkbox"/> Multiple methods of assessment of student learning are utilized to guide instruction
<input checked="" type="checkbox"/> Instruction and lesson activities are rigorous for students	<input checked="" type="checkbox"/> Students are sitting tall in chairs to increase attention and learning
<input checked="" type="checkbox"/> Evidence of Professional Development Strategies are seen in instruction	

Comments:

Great high level thinking questions are asked. The students have to really think about why telling time is the way it is rather than just knowing how to tell time. They will have a better understanding if they understand the "why". Lesson was short, but very clear. This allows the students more time to work independently to practice the concept. Clarification is made as soon as you notice students aren't doing things correct or are having a hard time with something.

Recommendations:

Keep up the great work.

Comments:

It is very evident that you are consistent with what you say to the kids about how to solve word problems as the kids were able to answer each others questions at the same time as you were saying it. This is very important to increase student learning as they when they hear the same thing over and over they will remember it better. Great job inbedding testing strategies into lessons already without focusing on the test, but more so letting them know they will see it again on the test. It is great to see that students are not afraid to ask questions. This shows that you have created an amazing learning environment.

Recommendations:

I would love for you to think about some of the strategies that you use when teaching math that you feel make your students math growth so great and prepare a training for all the teachers.

Evidence and Comments:

Great use of whiteboards to check for understanding. It is evident that you know your students as you give frequent reminders to keep eyes on your own work but saying "I wanting to know what everyone know not just a few." You have done a great job of cutting out the filler words. You used to say "um" and "and" a lot, but you use those fillers very little now during your instruction. Great job.

Summary of Domain 4 - (40 Points each observation)	33	0	33
Evidence and Comments: Thank you for all that you do for the kids and the school. You are a team player and always willing to help out when needed. Keep working on being at school by 7:30. CKLA gradebook looks good for both trimester 1 and 2, but Math only has 1 grade in trimester 1 and 0 grade for trimester 2. Please get math gradebook up to date. This is important incase there are questions on grade for report cards. We also have to keep gradebooks for several years and they can be looked at for audits.

5. Again, ask students what they noticed the modelers doing.
6. Have all students model while you observe and coach them.
7. Provide feedback, naming specific, positive actions you notice and redirecting respectfully but clearly when students go off track.
